

DropStop Wine Pourer Discs

With the DropStop® you will never again get stained tablecloths from wine bottles dripping.

Anyone who has been to the Wine and Cheese Show, Gourmet Wine and Food Show or other major wine events has seen these handy little devices in action. Simply insert the disc in the bottle where it fits tightly against the side of the bottle. This will form a seal which prevents any liquid from seeping out, including the escape of any drops. The 'cutting edge' created actually cuts the drop off before it can roll down the neck and side of the bottle.

The DropStop® pouring disc was invented by the Danish inventor Brian Vang by coincidence after a minor dining disaster. This unique invention has become a must for those who enjoy wine.

The product offers the following features:

- 100% effective, prevents drops from happening.
- Convenient and easy to use: just slip it into the neck of the bottle.
- Reusable - after use, rinse under the tap and wipe dry.
- Pliable yet durable: DropStop® can be used for several years.

How to use the DropStop®

1. Roll up the disc.
2. Place the disc in the top of the bottle.
3. Pour the wine without spilling a drop.

DropStop[®] discs are known and used by wine lovers throughout the world. Millions of discs have been sold world-wide.
